Eisenhower Matrix – ExpenseSplitter

	urgent	Not urgent
Important	**DO – Your MVP** • Add and remove group members. • Record shared expenses, including the amount, description, payer, and participants sharing the expense. • Split expenses equally among selected participants. • Calculate each person's total share and balance. • Display who owes money and who is owed money. • Save and load group members and expense records using CSV files.	**SCHEDULE – For V2.0+** • Allow expenses to be split using custom amounts or percentages. • Support multiple groups for different trips or occasions. • Allow users to edit or delete previously recorded expenses. • Calculate simplified settlements to minimize the number of payments between people. • Generate expense summaries that can be exported or shared.
Not important	**DELEGATE – Use a Library** • Use Java's BigDecimal class for accurate monetary calculations.	**DELETE – Cut It** • Connect directly to bank accounts. • Make actual payments or transfer money between users.

	• Use Java's ArrayList and HashMap classes to organize group members and expenses. • Use Java's Files and Path classes to read and write expense records.	• Add user accounts, passwords, and online authentication. • Include messaging or group chats.
